Search Engine Optimization

What is SEO? SEO is short for Search Engine Optimization, and there is nothing mystical about it. You might have heard a lot about SEO and how it works, but basically it's a measurable, repeatable process that is used to send signals to search engines that your pages are worth showing in Google's index. If you work with Wordpress, you'll get SEO suggestions automatically to your texts and photos in a convenient way. Readability rapport etc.

For those who like to start a blog page:

Writing a blog – good article
